OBJECTIVE

Final-year Computer Science Engineering student specializing in Data Science, seeking a **6-month End-of-Studies Internship (PFE)** in **Data Science, Data Engineering, or MLOps**. Solid, project-proven experience architecting production-oriented platforms that bridge backend APIs and predictive analytics.

EDUCATION

Engineering Degree in Computer Science — Data Science

ESPRIT, Tunis

2021 – 2027 (Expected)

Fifth and final year. Focus areas: Data Science, Databases, Machine Learning, Software Engineering, Systems Design.

TECHNICAL SKILLS

Languages: Python, TypeScript, JavaScript, SQL, Java, R

Data & Machine Learning: Pandas, NumPy, scikit-learn, statsmodels (ETS, ARIMA/SARIMA), MLflow

Backend & APIs: Fastify, Node.js, Express, REST APIs, JWT Authentication, RBAC

Databases: PostgreSQL, MongoDB, Neo4j, Data Warehousing, Schema Design, Migrations

DevOps & MLOps: Docker, docker-compose, CI-ready pipelines, Experiment Tracking

BI & Visualization: Metabase, Power BI, Google Data Studio, Plotly, Seaborn/Matplotlib

Frontend: React, Next.js, Tailwind CSS

Tools & Methods: Git/GitHub, Linux, Agile/Scrum, CI/CD

PROFESSIONAL EXPERIENCE

Next.js Developer Intern

May 2024 – Aug 2024

iTransform365

- Built and optimized Next.js components for performance and scalability; implemented responsive UI with Tailwind CSS and TypeScript.
- Collaborated with backend engineers to integrate PostgreSQL services and delivered production-ready features.

React.js Developer

Aug 2022 – Apr 2023

Swiver

- Developed responsive UI components with React.js and TypeScript; implemented multilingual support (Arabic, English, French).
- Optimized application logic to improve UX performance, building on a prior React.js Developer Internship at Swiver (Jun – Aug 2022) focused on UI responsiveness, translation features, and accessibility.

ACADEMIC & PERSONAL PROJECTS

ResearchBridge — Research Intelligence Platform

Solo Developer

- Built and shipped, solo, an end-to-end platform that takes a research idea or uploaded paper and returns an evidence-grounded assessment: related work, novelty, research gap, plausible applications, and feasibility.
- Architected the full pipeline — literature ingestion (arXiv/Semantic Scholar/PubMed), PostgreSQL + pgvector semantic retrieval, LLM-based knowledge extraction, and gap/opportunity detection, with every claim tied to cited evidence.
- Engineered for solo-build reliability: categorical (non-fabricated) confidence scoring, loud/logged ingestion failures, and a free/open-source-first stack with LLM providers behind a replaceable interface.

Tools & Technologies: Python, PostgreSQL/pgvector, LLM APIs, Docker

Estate-Mind — Tunisian Real Estate Data Pipeline & EDA

Data Analyst

- Built a reproducible data pipeline and advanced analysis notebooks yielding actionable market insights: price distribution by region, listing activity, rental/sale split, and spatial visualizations.
- Applied clustering to segment property listings and produced reporting-ready visuals for portfolio and business use.

Tools & Technologies: Python, Pandas, Seaborn, Matplotlib, Plotly

MLOps Pipeline & Full-Stack Web Application

MLOps / Full Stack Developer

- Built an end-to-end ML pipeline (reproducible training/evaluation, MLflow tracking, Dockerized services) and a type-safe full-stack app (Fastify + Next.js) with PostgreSQL persistence and authentication.

Tools & Technologies: Python, scikit-learn, MLflow, Docker, Fastify, TypeScript, PostgreSQL, Next.js, Tailwind CSS

CERTIFICATIONS & LANGUAGES

- CCNA: Switching, Routing, and Wireless Essentials — Cisco
- MongoDB Certified Node.js Developer — MongoDB
- Neo4j Fundamentals — Neo4j Graph Academy

Arabic — Native
English — Fluent
French — Basic
